Fire Reimagined.

For more than 40-years, Acucraft has been designing, developing, and perfecting the fireplace experience. Our fireplaces are handcrafted and custom built by a team of engineers and craftsmen who are committed to quality and performance. At Acucraft, we create the most unique, distinctive, and highest quality custom gas and wood burning fireplaces in the world.

We are the fireplace experts.

When it comes to delivering the absolute best fireplace experience, there are no shortcuts. Our commitment to quality and performance is handcrafted into every fireplace that bears our nameplate. Built in Big Lake, Minnesota, by true craftsmen who know how to conquer the cold and deliver a fireplace that performs as good as it looks. Built from heavy-gauge US Steel and backed by a Lifetime Warranty, nobody does it better.

CERTIFIED

Our outdoor gas fireplaces are ANSI Z21.97 / CSA 2.41-2017 and ANSI Z21.50 / CSA 2.22-2019 certified.

CUSTOMIZED

Acucraft works directly with you to create a truly unique fireplace experience.

HANDCRAFTED

Never mass-produced, each fireplace is meticulously, custom built.

WORLDWIDE

Built in America and shipped directly to you, anywhere in the world.

WARRANTY

Keep the fire burning, each Acucraft firebox is backed by a Lifetime Warranty.

Safety & Certification

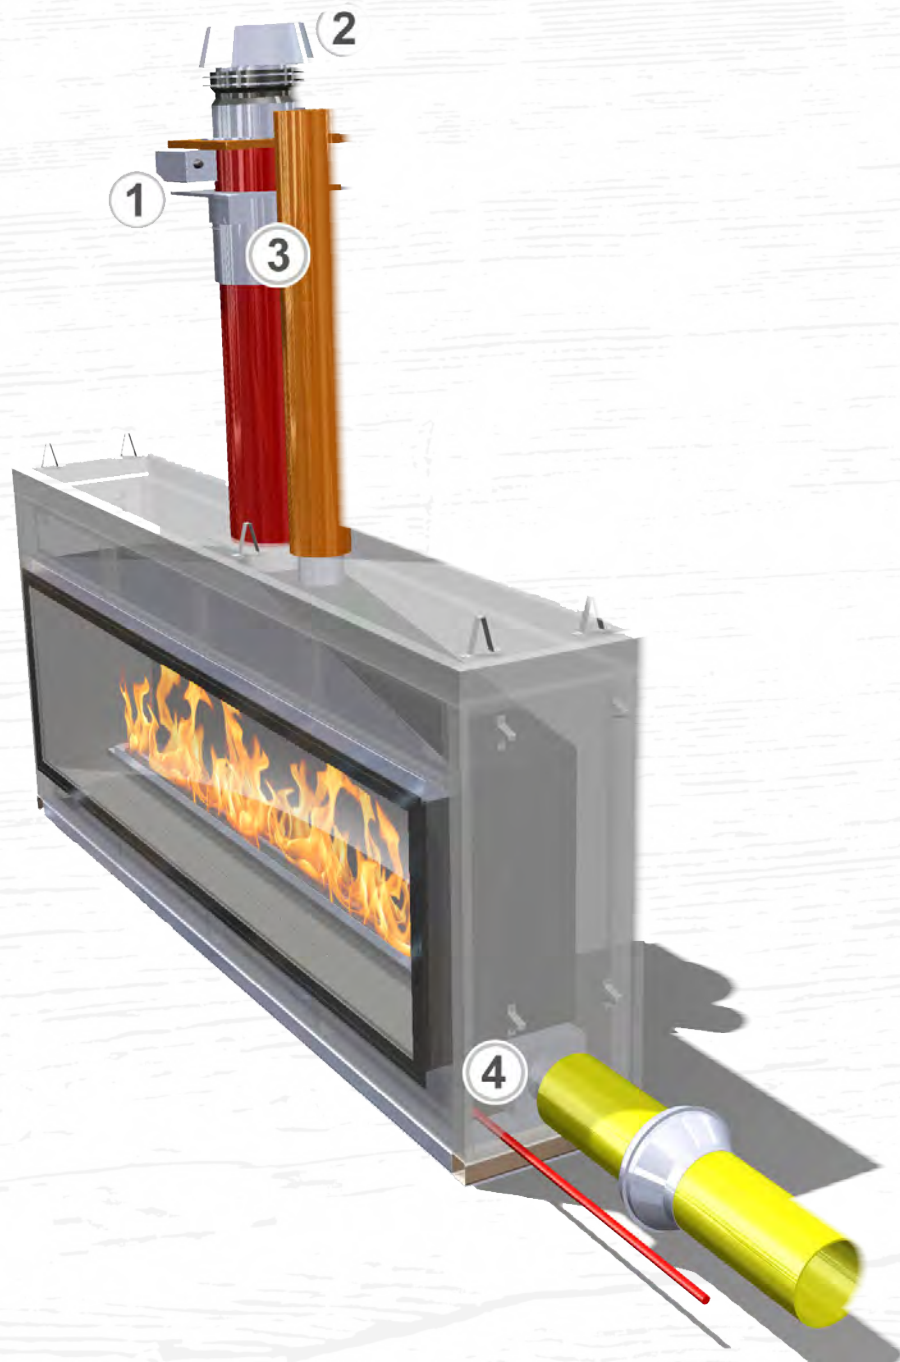

Outside air is drawn into the channel between the panes of glass and is pulled into the firebox for combustion

Dual Pane Glass Cooling System

Our dual-pane glass cooling system is designed to enhance safety and comfort in any residential or commercial space.

Its innovative design allows you to enjoy the cozy ambiance of a fire without concerns about heat or safety hazards.

Versatile and adaptable, this system can be seamlessly installed in nearly any setting, making it an ideal solution for both home and business environments.

Gas Fireplace Safety

Our gas fireplace systems are built with multiple safety checkpoints to ensure secure operation, each of which must be met before ignition:

1. *Damper Activation: Turning on the fireplace sends a signal to the automatic draft system, which opens the damper.*
2. *Exhaust Fan Engagement: The exhaust fan activates to begin proper airflow.*
3. *Draft Verification: The provided draft system confirms the safe removal of flue gases.*
4. *Ignition and Combustion: The gas valve opens, triggering spark ignition, while the flame sensor ensures safe combustion.*

This process guarantees both safety and performance for your peace of mind.

Safety & Certification

Acucraft fireplaces are never mass-produced. Every gas fireplace is tested and certified; comes with a manual, and a 3rd Party label for your one-of-a-kind install. Nothing leaves our facility without meeting and exceeding our safety standards.

- Exclusive in-house test lab
- Certifying your fireplace to ANSI and CSA standards

Available Resources

Specifying the perfect fireplace for your project has never been easier. Acucraft offers user-friendly fireplace design and specification tools, empowering you to effortlessly strategize and bring your vision to life for both residential and commercial spaces.
